### **National exposure standards:**

None assigned by National Occupational Health and Safety Commission for the product.

Refer to exposure standards for each component.

Camphor: TWA 12 mg/m<sup>3</sup>, STEL 19 mg/m<sup>3</sup>

Gum Turpentine: TWA 557 mg/m<sup>3</sup>

As published by the National Occupational Health and Safety Commission. The exposure standard, expressed as TWA, is the time weighted average airborne concentration for a normal eight hour day to which nearly all workers can be exposed repeatedly without adverse effects. STEL or short term exposure limit is a fifteen minute time-weighted average exposure which should not be exceeded, even if the eight-hour time weighted average is within the exposure standard. These exposure standards are issued as guidelines for good practice. All atmospheric contamination should be kept to the lowest practicable level. Exposure standard data should not be used as fine lines to distinguish between safe and unsafe conditions.

### **Biological limit values:**

No biological limit allocated.

### **Engineering Controls:**

None

### **Personal Protective Equipment:**

**Eye:** No special equipment requirements for minor exposure (small quantities). Otherwise safety glasses with side shields.
